

LED TriWave

Photobiomodulation Therapy · Pre & Post-Treatment Care

PRE & POST-TREATMENT CARE

PRE-TREATMENT INSTRUCTIONS

LED TriWave phototherapy is a gentle, no-downtime treatment using red, near-infrared, and blue wavelengths to stimulate collagen, reduce inflammation, and target acne. It requires virtually no preparation.

PREPARATION

- No special preparation required.
- **Arrive with clean, makeup-free skin** — no creams, serums, or SPF on the face.
- Safe immediately before or after most other treatments — your provider will sequence it appropriately.
- No contraindications with other treatments in the same appointment.

WAVELENGTH GUIDE

- **Red (630nm):** Collagen stimulation, anti-aging, wound healing acceleration.
- **Near-Infrared (830nm):** Deep tissue healing, inflammation reduction, post-procedure recovery.
- **Blue (415nm):** Active acne, antibacterial (targets *P. acnes* bacteria).

OPTIMISE YOUR SESSION — OPTIONAL PRE-LED PRIMER

- Applying **Epicutis Lipid Serum** (*or your own antioxidant serum*) before your LED session is recommended. The Glucosylrutin flavonoid in Epicutis has direct mechanistic relevance for photobiomodulation — it enhances the LED's effect.
- **Noon Halo-Ronic Serum** (*or your own hyaluronic acid serum*) is an alternative pre-LED primer for hydration amplification.

POST-TREATMENT INSTRUCTIONS

LED TriWave has no downtime. Your skin is primed for maximum product absorption immediately after treatment.

Immediately After Treatment

- Apply your **Noon concern-specific serum** (*or your own concern-appropriate active serum*) — skin absorption is significantly enhanced post-LED.
- Follow with your **Noon moisturiser** (*or your own fragrance-free moisturiser*).
- Apply **broad-spectrum SPF 50+** if going outdoors.
- You may resume your full skincare routine immediately.

Ongoing

LED TriWave

Photobiomodulation Therapy · Pre & Post-Treatment Care

PRE & POST-TREATMENT CARE

- No restrictions on activity, makeup, or skincare.
- For **acne patients**: LED TriWave sessions may be weekly — consistent frequency drives results.
- For **post-procedure recovery**: LED is often combined same-day with energy device treatments (VirtueRF, NouvaDerm, PlaDuo Pro) — near-infrared accelerates healing.
- For **rosacea**: red and near-infrared wavelengths used; avoid blue wavelength.

MEMBERSHIP NOTE

- 1 complimentary LED session per month is included in the **Treasury Reserve** membership tier.
- Dedicated LED memberships are available for acne, rosacea, and chronic skin conditions (\$550/month for up to 4 sessions/month).

LED TriWave is safe, gentle, and compatible with all skin types and Fitzpatrick tones. Contact us anytime at aesthetics@treasuryhealth.ca
