

PlaDuo Pro

Dual Plasma (Nitrogen + Argon) · Pre-Treatment Instructions

PRE-TREATMENT CARE

PlaDuo Pro uses patented SpinShot Technology to deliver both nitrogen plasma and argon plasma. These simple preparation steps maximise efficacy and safety.

SKINCARE PREPARATION

- Your provider may apply **AMP DJTOX Pre-Treatment Skincare Serum** at the start of your appointment — no prep action required from you.
- Discontinue **retinoids and AHA/BHA exfoliants** 3–5 days before your appointment.
- Arrive with **clean, makeup-free skin**. No serums, oils, or moisturisers on the treatment area.
- Avoid using any **harsh or active skincare** on the day before treatment.

SUN & LIFESTYLE

- Avoid **direct sun exposure and tanning beds** for 2 weeks prior.
- Do not use **self-tanner** for 2 weeks prior.
- If you have a history of **cold sores (HSV)**, inform your provider — antiviral prophylaxis may be prescribed.
- Do not use **isotretinoin (Accutane)** within 6 months of treatment.

ACNE & ROSACEA PATIENTS — ADDITIONAL NOTES

- If you are being treated with **PlaDuo Pro Argon** for active acne: your provider may schedule more frequent initial sessions (weekly) to achieve clearance before spacing out.
- A temporary **purging period** is normal and expected after Argon plasma for acne — this is a sign the treatment is working.
- Continue any prescribed oral or topical acne medications unless your physician advises otherwise.
- For rosacea: avoid spicy foods, alcohol, and temperature extremes in the 48 hours before treatment.

DAY OF TREATMENT

- Arrive with completely clean skin — no SPF, makeup, or skincare products.
- Topical anaesthetic is not routinely required for PlaDuo Pro, but inform your provider if you have low pain tolerance.
- Treatment sessions are typically 30–45 minutes.
